srinivassivaratri.is-a.dev | Remote, India (IST, UTC+5:30) | Open to full-time and contract

Summary

Full-stack engineer with an MS in Computer Science. Ships the browser, the API and the database together, and fixes the security and data bugs that sit between them. Upstream work reviewed by better-auth and go-ethereum maintainers.

Skills

Frontend: TypeScript, React, Next.js, Tailwind CSS, vanilla JS, streaming fetch, Jest

Backend: Go (net/http), Bun and Elysia, Python (Flask, FastAPI), REST APIs, auth, rate limiting

Data and realtime: PostgreSQL, Supabase (Auth, Realtime, Storage, row-level security), SQLite, sqlc, goose

Delivery: Docker, GitHub Actions, Render, pytest, bun test, gitleaks

Experience

Software Engineer, Independent | Remote

May 2025 to present

- Traced an email-enumeration leak in better-auth to its Have I Been Pwned plugin and proposed a request-scoped skip flag with a regression test. Maintainers adopted the approach and shipped it (PR #5998).
- Designed "geth db truncate-freezer" for go-ethereum (PR #31351), revised across three core-maintainer review rounds to batch-process instead of holding about 15 GB in memory. The core team later built its own version.

Software Engineer, Accenture | Bangalore, India

July 2021 to July 2022

- Wrote a Python ETL script that automated data processing, saved 50 labor hours per month, and cut errors.
- Implemented a GitHub Actions CI/CD pipeline.

Projects

Rashomon | Next.js, TypeScript, Bun, Supabase Realtime, Gemini

rashomon-ii0a.onrender.com | [repo](#)

- Live reading rooms: two people highlight the same passage, get matched over Supabase Realtime, and talk for five minutes; the transcript replays for later readers. Live on Render and Supabase free tiers.
- Closed an impersonation hole (the API trusted a client-sent userId with the service-role key), wildcard CORS and SSRF in URL import; added row-level security and atomic chat appends; replaced billed Google Vision with free Gemini OCR. 41 API tests (about 98% line coverage) and 32 Jest tests; CI had been red since October 2025.
- Added an invite link to the exact text and a bookmarklet; fixed onboarding, which called a route that did not exist, and kept the post-login destination with a same-site-only redirect.

DreamWeave | Python, Flask, SQLite, xAI, ElevenLabs, vanilla JS

dreamweave-v2.onrender.com | [repo](#)

- Interactive bedtime stories with narration. Every user wrote to one shared audio file, so concurrent listeners heard each other's stories; replaced it with per-story audio, an owner-token cookie and owner-only 404s.
- Streamed chapters to the browser, turned upstream failures into clean 502s without saving partial stories, rendered model output as text only (closing an XSS path), and added the no-key demo mode the live site runs. 24 tests at 91% coverage.

Chirpy | Go, PostgreSQL, sqlc, vanilla JS, Docker, Render

chirpy-slpq.onrender.com/app | [repo](#)

- Go API with a small browser client: keyset pagination, hashed refresh tokens, per-IP login rate limits and security headers. Closed a file server that exposed .env.
- Integration tests against real PostgreSQL (64.2% of the server package); CI runs race tests, an sqlc drift check, a distroless Docker build and gitleaks. Hosted on Render, database on Supabase.

Education

MS, Computer Science, University of Alabama at Birmingham, AL, USA

Aug 2023 to May 2025

BS, Computer Science, BV Raju Institute of Technology, India

Aug 2017 to June 2021

Boot.dev, coursework, HTTP Servers in Go, RAG, CI/CD with GitHub Actions and Docker, Memory Management in C, SQL
